NSF/ANSI Standard 51: Food Equipment Materials

NSF International is a global organisation offering a range of services, including product certification and testing in the food and drinking water industries. NSF/ANSI standard 51 was developed to define health and sanitation requirements for commercial food equipment.

Many JG Speedfit branded products are NSF/ANSI standard 51 listed. These listings can be viewed on the NSF website:

<http://info.nsf.org/Certified/Food/>

As part of the product evaluation, toxicologists at NSF review the formulation of all food contact materials against the FDA (Food and Drug Administration) rules and guidelines. Our product listings are maintained through NSF surveillance audits which take place at our manufacturing facilities.
